

RAPS•ERP

Procurement · Inventory · Quality · Compliance

Client Information & On-boarding Pack

Prepared on **21 May 2026**

Hosted on Amazon Web Services · Hyderabad (ap-south-2)

1. Welcome

RAPS-ERP is a web-based enterprise resource planning platform built for manufacturing and laboratory operations. It connects your stores, purchase, quality, finance, and management teams in one place — eliminating spreadsheets, scattered emails, and paper trails.

What you can do from day one:

- Raise and approve purchase requests across multiple units
- Compare supplier quotations side-by-side and issue purchase orders
- Track inward goods, QC inspections, and material issuance
- Manage gate passes, inter-office notes, and inventory transfers
- Audit every action with a full timestamped trail

How to access

The system runs entirely in the browser — there is nothing to install on any computer or phone. Open a modern browser (Chrome, Edge, Firefox, or Safari) and visit the URL provided to you on activation.

Item	Detail
System URL	<i>provided separately at handover</i>
Supported browsers	Chrome, Edge, Firefox, Safari (last 2 versions)
Mobile	Fully responsive — works on phones and tablets
Working hours	24 × 7 availability

2. How the System Works

RAPS-ERP follows a simple **request** → **approve** → **act** → **record** pattern. Every business action — buying a material, issuing stock from the warehouse, sending equipment off-site for repair — starts as a request, moves through one or more approvers, and ends with an automatic record in the audit log.

Seven user roles

Admin

Full system access. Approves purchase requests and manages users.

Manager

Raises purchase requests, material issue vouchers, and gate passes for their unit.

Store Manager

Handles inward entry, stock movement, and warehouse logistics.

Purchase Officer

Collects quotations, places orders with suppliers, and tracks deliveries.

Accounting

Approves payments, verifies invoices, and authorises gate pass closures.

QC

Conducts quality inspections on incoming goods and issues MIR reports.

Lab

R&D team — raises material requests and processes inter-office technical notes.

Multi-unit

Each role is scoped to its unit; inter-unit transfers are tracked separately.

Built-in safeguards

- **Audit log** — every create, approve, reject, and delete is permanently recorded with user name, time, and IP address.
- **Role-based access** — users only see what their role permits.
- **Approval chains** — high-value actions require multiple sign-offs.
- **Real-time notifications** — approvers are alerted the moment a request is raised.
- **Document storage** — attach PDFs (specs, quotations, test certificates) directly to any record.

3. Workflows in Plain English

Below is what each major workflow does and who is involved at each step.

1 Purchase Request & Purchase Order

What it does: Lets a unit raise a request for materials, get it approved, collect quotations, and place an order with the chosen supplier.

Flow: Manager raises PR → Admin approves quantities → Purchase Officer collects quotations → PO issued to supplier → Goods arrive → QC inspects → Inward entry closes the loop.

2 Material Issuance (MIV)

What it does: Allows production or lab teams to withdraw stock from the warehouse with proper authorisation.

Flow: Requester fills MIV → Store Manager approves and issues → Collector signs off → Stock auto-updates.

3 Gate Pass Management

What it does: Tracks assets leaving the premises — for repair, calibration, or external testing — and ensures they come back.

Flow: Unit Manager requests → Store Incharge arranges vehicle → Accounting approves payment terms → Final approval & dispatch → Return logged.

4 Quotation & Supplier Management

What it does: Maintains a supplier directory and lets Purchase Officers compare multiple bids before placing an order. Supports union quotations across units to negotiate better rates.

5 Payment Requests

What it does: Tracks advance, partial, and final payments against every PO. Accounting approves each payment request after invoice verification.

6 QC Inspection & MIR

What it does: Quality team inspects every incoming consignment, reviews supplier documents (COC, COA, test reports), accepts or rejects each batch, and issues the Material Inward Receipt.

7 Inventory Transfers

What it does: Moves stock between units with full approval and a complete trail of who moved what, when, and why.

8 Inter-Office Notes (ION)

What it does: Lets unit managers send technical notes to the lab along with samples and job details — and tracks the lab's response.

9 Product Catalog & Inventory

What it does: Central product database with SKU codes, current stock per unit, batch-wise tracking (FIFO), and live availability across the organisation.

4. Pricing

✓ 6 MONTHS FREE TRIAL INCLUDED

Your subscription starts with a **complimentary 6-month evaluation period**. During this period you have full access to every feature with no commitment. Regular billing begins only after the trial ends.

MONTHLY HOSTING & INFRASTRUCTURE

₹1,500 / month

All-inclusive · Hyderabad data center · No setup fee

What is included in the monthly fee

Component	What you get
Hosting	Dedicated cloud server (AWS EC2) in Hyderabad, India
Database	PostgreSQL 16 with daily transaction logs
Static IP	Fixed public address so your URL never changes
Backups	Weekly automated database backups to encrypted storage
Long-term archive	Backups older than 90 days auto-archived (12-month retention)
Bandwidth	Generous data transfer allowance (more than ample for ERP traffic)
SSL/HTTPS	Available on request when a custom domain is added
Updates & patches	OS, database, and security patches applied as released
Monitoring	Uptime and health checks

What is NOT included

- Custom domain registration (annual, paid directly to the registrar)
- Custom feature development beyond the contracted scope
- One-time data migration from legacy systems (quoted separately)
- Email/SMS gateway charges if integrated later

Long-term pricing guarantee: the ₹1,500/month figure is based on AWS list prices for the chosen Hyderabad infrastructure. These prices are stable and predictable — there is no time-limited promotional discount that expires.

5. Login Credentials

The following Admin accounts have been created for your team. Please change each password on first login.

Username	Temporary Password	Role
madhubabu	Admin@123	Administrator
rameshbabu	Admin@123	Administrator
sureshbabu	Admin@123	Administrator

Important — please read:

- Change every password the first time you sign in.
- Use a password of at least 10 characters with letters, numbers, and a symbol.
- Do not share credentials by SMS, WhatsApp, or email.
- The three Admin accounts above are protected — they cannot be deactivated or deleted, even by another Admin.
- Additional users (Manager, Store Manager, etc.) can be created by any Admin from the *Management* page.

If a password is forgotten

Any of the three Admins can reset another user's password from the Management screen. If all three Admin passwords are lost, contact your technical point of contact for a manual reset.

6. How Future Updates Reach You

The system is updated centrally. There is no software for users to download or install — every change goes live for everyone at the same time.

Type of change	Time to appear for users
Small fix (text change, button tweak)	Within 2 – 5 minutes of deployment
New feature	Within 5 – 10 minutes of deployment
Database schema change	Within 5 – 15 minutes · brief restart possible
Major version upgrade	Scheduled in advance · planned maintenance window

How a typical update happens

1. **Developer makes the change** in source code.
2. **Code is reviewed and pushed** to the central code repository.
3. **Server pulls the new code**, installs any new dependencies, and rebuilds the application.
4. **Application restarts** (typically less than 5 seconds of downtime).
5. **Browsers refresh automatically** — users see the new version the next time they reload the page.

What you have to do: nothing. If a user is in the middle of work when an update is deployed, they will simply see the new version after their next page refresh.

Maintenance windows

For larger changes that may involve a brief outage, we will give at least **24 hours' notice** by email and schedule the work outside business hours (typically Sunday between 10 PM and 6 AM IST).

7. Support & Contact

For any question, request, or issue:

Channel	Detail
Technical contact	<i>provided separately at handover</i>
Email	<i>provided separately at handover</i>
Phone / WhatsApp	<i>provided separately at handover</i>
Hours	Monday to Saturday, 10:00 to 18:00 IST

When raising a support request, please include

- Your username
- The screen or workflow involved
- What you were trying to do
- What you saw instead (a screenshot helps)
- The approximate time the issue happened
